

Tuning The Mercedes-Benz CL-Class: The Kicherer CL 60 Coupe

{mosgoogle right}The Mercedes-Benz CL600 is an immaculate creature, offering an incredible amount of luxury along with an equally awe-inspiring level of power. But for those looking to add an additional dose of thrust to the models 517-horsepower twin-turbo V12, Kicherer has unveiled a new tuning package for the CL600 – one they're calling the CL 60. Highlights of the package include an increase in output of 53 horsepower and 70 Nm of torque, a high-performance rear axle equipped with a differential lock and a modified transmission control module, handcrafted multi-part 20” Kicherer RS-1 wheels and a lowering of the suspension by 25 millimeters. To add a bit of outward style to their CL 60, Kicherer also added a few external mods, ranging from a new front/rear apron and side skirts to a four-pass sports exhaust system. And completing the package, various carbon fiber elements have been added to the CL 60s interior, including accents on both the doors and center console.
